Art Unit: 2652

1. Upon further consideration and in light of applicant's amendments/remarks, restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1, 12, 82-101 and 121-134, drawn to a transducer with specified layer orientations, classified in class 360, subclass 122.
- II. Claims 23, 102-112 and 135-141, drawn to a transducer with specified growth morphology, classified in class 360, subclass 126.
- III. Claims 47 and 113-120, drawn to an information storage system, classified in class 360, subclass 88.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions of groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention of group I has separate utility such as usable in a transducer not having a specified growth morphology, for instance. See MPEP § 806.05(d).

Inventions of groups III and I are related as combination and subcombination, respectively. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the combination does not require the specified layer orientations, for instance. The subcombination has separate utility such as usably in an information storage system not having a “moving medium,” for instance.

Inventions of groups II and I are related as combination and subcombination, respectively. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the growth morphology, for instance. The subcombination has separate utility such as usably in an information storage system not having a “moving medium,” for instance.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 C.F.R. § 1.143).

Art Unit: 2652

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(i).

6. Any inquiry concerning the above referenced application should be directed to the examiner, Craig A. Renner, whose telephone number is (703) 308-0559, and whose facsimile number is (703) 872-9314. The examiner can normally be reached Tuesday through Friday from 7:30 a.m. to 6:00 p.m. E.S.T.
